

MagTek S4

Steel Manual attack resistant door

All business premises have areas which need to be sealed off and rooms where it is imperative that unauthorised personnel do not gain access.

Gunnebo has created the MagTek S4, a security door designed to protect sensitive areas, such as cash counting rooms, cash transit rooms, back office rooms, security enclosures, etc. Gunnebo has developed several versions of the MagTek S4 range to meet a variety of customer requirements. The doors can be fitted as left or right opening for more convenience.

They are available in indoor or outdoor versions. This means that the MagTek door can be fitted in accordance with specifications in a standard office wall, either on the inside or outside of a building.

For installations in different building types, the MagTek S4 door frame is available in two versions – either steel frame or screwed frame.

The electrical version, with its motorised boltwork, makes operating the door exceptionally easy. From the outside, the door is operated using an access control solution which controls the motor, and from the inside, a push button triggers the motor, releasing the bolts and opening the door.

MagTek S4

Steel Manual attack resistant door

Burglary protection

The MagTek S4 has undergone stringent tests to ensure that it meets the standards required for security doors and will perform reliably. It has been granted Level 4 certification in accordance with XP ENV 1627-30.

The door is available with various levels of ballistic protection, having been certified FB6 NS in accordance with EN 1522 and in classes 3 and 4 in accordance with NF-P 20.601.

Locking

The MagTek S4 security door is fitted with a European profile cylinder key lock. As an option, an electrical lock can be installed; a keypad or any other access control device may be located to the side of the outer door.

Type

- 1-leaf hinged door set. 80mm thick leaf including 4 mobile bolts and 4 fixed bolts.
- Either inward or outward opening with DIN right or DIN left.
- Available with 1 of 2 kinds of frames:
