

## Readers and Cards

The trend towards multi-technology identification and biometric authentication

As a leader in the area of identification and authentication, Gunnebo offers a vast range of readers, cards and controllers for regulating, managing and controlling movements of people and accessibility to particular areas.

From simple read-only proximity cards to contactless read-write smart cards, Gunnebo provides innovative solutions for identifying and authenticating people - solutions which can be perfectly adapted to meet the needs of companies and their specific requirements.

By drawing on its security technologies and others derived from very close partnerships with leading market players, Gunnebo offers a full and diverse range of secure pre-coded cards and biometric, magnetic, hands-free or long-distance readers.

Gunnebo's solutions meet the requirements of international standards, combining quality and lasting technological expertise.

Access Control

## Adaptable security solutions designed to meet ever-changing requirements

From simple identification to multiple identification,  
Biometric authentication for added protection at high-security sites,  
High-performance controllers for managing accesses and logging events,  
An architecture in keeping with the size of the site,  
A multi-application solution: a single card for several applications (access control, company restaurant, time & attendance...),  
Electrical personalisation of cards.

## Easy-to-use based on proven solutions

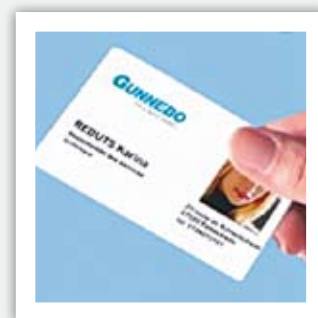

A centralised system providing easy, fast access in real-time to events,  
A broad range of readers to meet identification requirements for people and vehicles,  
A range of cards that can be customised and adapted to your company's graphic guidelines.

## Guaranteed flexibility through tried and tested technologies

Using proximity solutions: read-write chip card,  
Using biometric solutions: fingerprints, face shape, hand...,  
Using long-distance solutions: high-frequency cards, UHF tags,  
Using contact solutions: electronic keys (DALLAS chip),  
Maintenance of facilities that use legacy technologies: swipe cards, barcodes...

## A professional service for more added value

A comprehensive solution that uses readers, controllers and cards,  
An offering that is integrated into Gunnebo's business applications,  
Platforms that can be upgraded and are compatible with ISO 14443 standards,  
Experienced technical and support teams.

Gunnebo oversees the design, industrial scale production and manufacture of its equipment, as well as the development of its software applications. By drawing on its experience as a manufacturer, Gunnebo can ensure that its solutions remain at the cutting edge, and keep pace with new technologies on the market. The result is that the Gunnebo Group is able to meet the field requirements of companies.
