

SafePoint Mistral

Functional cash protection solution

SafePoint Mistral

Customisable cash till unit...

SafePoint Mistral is a customisable cash till unit designed for the daily storage of cash and valuables in the workplace. Its mechanical construction, electronic time lock system and access authorisation comply with current security guidelines. The unit has a programmable time-delay feature operated via a simple control panel on top of the unit, and its drawer and door modules are locked electro-mechanically.

To optimise storage, there is an extensive range of fittings options, including a coin drawer, stationery drawer and security compartment. An optional security lid can also be added to conceal the contents of a full drawer. A single key is used for activation and deactivation.

SafePoint Mistral can be anchored to the floor, in the same way as a safe, mounted to a base, or fixed to office furniture.

Quick and simple configuration of the SafePoint Mistral can be carried out using a special PC configuration tool. ■

SafePoint Mistral can be configured to hold a maximum of eight drawers.

Range of Possible Solutions

The arrangement of drawers and deposit functions for the SafePoint Mistral can be configured to suit your needs.

Basic Configuration Types

- Type A: 1 drawer module and 1 door section
- Type B: 2 drawer modules and 1 door section
- Type C: 3 drawer modules
- Type D: 4 drawer modules

Each drawer module can be fitted with a full drawer or a split drawer. In this way, you can have a maximum of eight drawers if required.

Flexible Deposit Options

Choose between a drawer with a deposit flap or, if you do not want to unlock and open the drawer, a door with a deposit slot where deposits can be made directly and securely into the unit.

The deposit slot option comes complete with a special four-part partitioned cassette so that money can be sorted by denomination or currency when deposited.

Choice of Design

SafePoint Mistral is produced in three standard colours: light grey, dark grey and metallic silver.

However, the front of the unit may be painted in any RAL colour you choose. This offers several benefits:

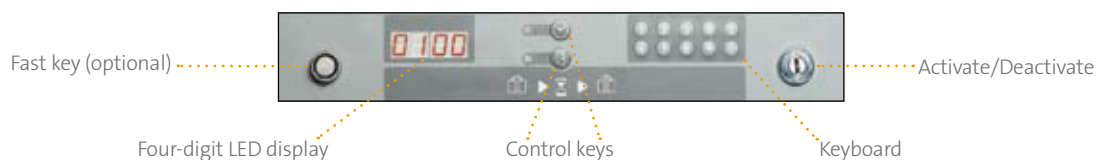

- It can be painted to fit in with the design of your office. This is not purely aesthetic – if SafePoint Mistral blends in with the office interior to look like a piece of office furniture, then it is not immediately obvious that it is a secure storage unit where money is being kept.
- It can also be painted to match your corporate colours and design, and incorporate your company logo.

Fast Key

The fast key (electronic key) is an option which allows personalised access to SafePoint Mistral. Access rights for a fast key, such as quick access to certain drawers without time delay, are set via the unit configuration.

Control panel for SafePoint Mistral

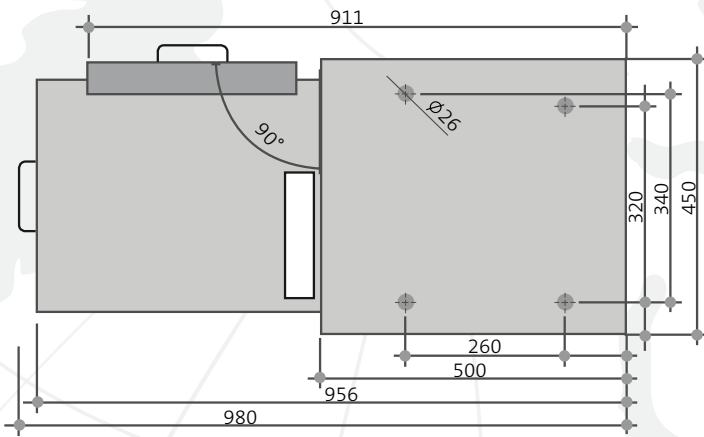

Features

- Customised security levels
- Control panel (see image above)
- Alarm interlocking of several Mistral units
- Motorised locking system
- Deposit of wads of notes, coin rolls, keys or valuables
